A similar example of a river restoration project in London

Enfield Council are restoring 450 metres of the watercourse along the northern boundary of Firs Farm Playing Fields that currently flows through a concrete pipe (or culvert). Phase 1 will enhance the park by introducing a watercourse with natural features and the improvement of an existing flood defence bund on the north and east boundaries of the park. Phase 2 is planned to be carried out in 2015, this will provide additional crossing points and wetland features.

The sports pitches will not be adversely affected by the work during construction or once the works are completed.
